Pond Safety 'Net' - DIY Installation Booklet

Thank you for purchasing the DIY Pond Safety Net kit.

Dependant on the specification of your pond your DIY Pond Safety kit will comprise of the following;

Net
(A)

Anchor
(B)

Carabineer
(C)

You will also need:-

A Cordless Drill

Drill Bits*

Marking Tool

Hammer

* 6.5mm into Stone; 5mm into Aluminium; 6mm into Wood

N.B. DO NOT use electrical equipment near water

Pond Safety 'Net'- DIY Installation Booklet

Drill a hole at 0.8m intervals around the entire edge of the pond.

If the pond edge has corners ensure that a hole is also drilled into the corner. This in addition to the holes at 0.8m intervals.

Using a hammer tap an Anchor (B) into each hole until just the eye of the Anchor (B) is visible above the surface.

N.B. Place a screwdriver into the eye of the Anchor (B) whilst tapping the Anchor (B) into the holes. This prevents the eye of the Anchor (B) closing when tapping with the hammer.

Clip a Carabineer (C) into each eye of the Anchors (B).

Position the Carabineers (C) so that the carabineer (C) clip catch is facing outwards towards the water.

Position the Net (A) over the entire pond surface ensuring that all carabineers (C) are covered underneath the Net (A).

Also ensure the squares within the Net (A) are kept as linear as possible.

Pond Safety 'Net'- DIY Installation Booklet

Starting with the corners, clip the Net (A) to the Carabineers (C).

N.B. Ensure to pull tightly and tension the Net (A) before clipping each corner whilst still maintaining the linear nature of the Net (A).

Select a Carabineer positioned in the middle of the pond; clip the Net (A) to the Carabineer (C).

At the opposite facing Carabineer (C) connect the Net (A) to the Carabineer (C).

Repeat the above until all middle Carabineers (C) are connected to the Net (A).

N.B. Ensure to pull tightly and tension the Net (A) before clipping each corner whilst still maintaining the linear nature of the Net (A).

Clip all remaining Carabineers (C) to the Net (A) ensuring to tension the Net (A) before clipping each Carabineer.

N.B. Ensure to pull tightly and tension the Net (A) before clipping each corner whilst still maintaining the linear nature of the Net (A).
